## Track Spacing and Structure Limiting Dimensions

The following data on track spacing has been derived from Track Construction Without Tears, published by Slater's (Plasticard) Ltd and is reproduced with their permission.

Space Between Adjacent Tracks
(Usually measured between the outside edges of the rail heads).

|  | Prototype |  | Model | Track Centres |
| :---: | :---: | :---: | :---: | :---: |
|  | mm | imperial | mm | mm |
| Standard between a pair of main lines | 1829 | 6 ft 0 in | 42 | 77 |
| Between a pair of main lines and one or a pair of additional running lines | 3048 | 10ft 0in | 70 | 105 |
| Between a main line and siding | 3048 | 10ft 0in | 70 | 105 |
| Between a main line and catch siding | 1829 | 6 ft 0 in | 42 | 77 |
| Between goods yard sidings | 1829 | 6 ft 0 in | 42 | 77 |
| Between goods yard sidings for carriageways | 7315 | 24 ft 0 in | 168 | 203 |
| Between coal sidings | 1829 | 6 ft 0 in | 42 | 77 |
| Between marshalling or sorting sidings | 2134 | 7 ft 0 in | 49 | 84 |
| Between carriage sidings | 2438 | 8 ft 0 in | 56 | 91 |
| Additional space to allow for lamp posts between sidings. etc. | $\begin{gathered} 610 \text { to } \\ 1220 \end{gathered}$ | 2 ft 0 in to 4ft 0in | 14 to 28 | 91 to 105 |
| Additional space to allow for large main line signal post | $\begin{gathered} 1372 \text { to } \\ 1524 \end{gathered}$ | 4ft 6 in to 5ft 0in | 32 to 35 | 109 to 112 |
| Additional space to allow for ordinary main line signal post | 1220 | 4ft 0in | 28 | 105 |
| Additional space for siding signal post | 1118-1 | 3 ft 8in | 26 | 103 |

Note: The Guild Standard track centre distances are 80 mm between main lines and 90 mm between sidings. Additional spacing may be necessary on curves, refer to Part 2, Section 1.3. The track centres shown in the table above include a 3 mm allowance for the width of the rail-heads.

Clearance Between Tracks And Structures. Etc

|  | Prototype |  | Model (mm) |
| :--- | :---: | :---: | :---: |
| Absolute minimum horizontal clearance to structures above <br> platform height | 1372 | 4 ft 6 in | 32 |
| As above. but desirable figure | 1524 | 5 ft 0 in | 35 |
| Minimum clearance to structures in goods yards (eg: shed doors) | 1295 | 4 ft 3 in | 30 |
| As above, but desirable figure | 1372 to <br> 2134 | 4 ft 6 in to <br> 7 ft 0 in | 32 to 49 |
| Absolute minimum vertical clearance on passenger lines | 4420 | 14 ft 6 in | 101 |
| As above. but desirable figure | 4572 | 15 ft 0 in | 105 |
| Absolute minimum vertical clearance in goods yards | 4267 | 14 ft 0 in | 98 |

Passenger Platforms

|  | Prototype |  | Model (mm) |
| :--- | :---: | :---: | :---: |
| Height of platform above rail level | 914 | 3 ft 0 in | 21 |
| Horizontal distance from outer edge of rail to extreme edge of <br> platform coping | 635 | 2 ft 1 in | 15 |
| Overhang of coping from wall face | 305 | 1 ft 0 in | 7 |
| Minimum distance of pillars. etc. from edge of platform | 1829 | 6 ft 0 in | 42 |
| Width of platform. small stations | 1829 | 6 ft 0 in | 42 |
| Width of platform. large stations | 3658 | 12 ft 0 in | 84 |
| Inclination of ramped ends | 1 in 8 |  | 1 in 8 |

## Goods And Mineral Loading Stages

Height above rail of:

|  | Prototype |  | Model (mm) |
| :--- | :---: | :---: | :---: |
| Stage for (un)Ioading general goods | 1067 | 3 ft 6 in | 24 |
| Cattle stage | 1067 | 3 ft 6 in | 24 |
| Horse stage | 1067 | 3 ft 6 in | 24 |
| Stage for loading high sided wagons with minerals, etc. by tipping | 2438 to <br> 8 ft 0 in to <br> 9 ft 6 in | 56 to 66 |  |
| Stage for coaling locos | 1520 | 5 ft 0 in | 35 |

Similar horizontal clearances apply as for passenger platforms, but an extra 1in is usually allowed.

## Carriage Loading Docks

For loading a road vehicle onto a wagon, etc.

|  | Prototype |  | Model (mm) |
| :--- | :---: | :---: | :---: |
| Height above rail level | 1220 | 4 ft 0 in | 28 |

Water Columns And Cranes

|  | Prototype |  | Model (mm) |
| :--- | :---: | :---: | :---: |
| Space required when column is between tracks | 3353 | 11ft 0in | 77 |
| Distance from rail to centre of column when column is outside tracks | 1981 | 6 ft 6 in | 47 |
| Distance of column behind signal of line on which engjne takes water | 18288 | 60 ft 0 in | 420 |

## Water Troughs

|  | Prototype |  | Model (mm) |
| :--- | :---: | :---: | :---: |
| Height of rim above rail level | 76 | 3 in | 2 |
| Height of water above rail level | 51 | 2 in | 1 |

Turntables

|  | Prototype |  | Model (mm) |
| :--- | :---: | :---: | :---: |
| Space between rim of turntable and an adjacent track | 2743 | 9 ft 0 in | 63 |

Engine Pits

|  | Prototype |  | Model (mm) |
| :--- | :---: | :---: | :---: |
| Width between side walls | 1143 | 3ft 9in | 26 |
| Depth of pit below rail level (inside) | 660 to 737 | 2ft 2in to 2ft 5in | 15 to 17 |
| Depth of pit below rail level (outside;) | 914 to 991 | 3ft 0in to 3ft 3in | 21 to 23 |

## Overbridges

|  | Prototype |  | Model (mm) |
| :--- | :---: | :---: | :---: |
| Minimum clear opening for single line | 4166 | 13 ft 8 in | 96 |
| As above. but desirable figure | 4724 | 15 ft 6 in | 108 |
| Minimum clear opening for double line | 7569 | 24 ft 10 in | 174 |
| As above, but desirable figure | 8077 | 26 ft 6 in | 185 |
| Minimum clear opening for four lines with one 10ft space | 15596 | 51 ft 2 in | 358 |
| As above. but desirable figure with one 10ft 6in space | 16307 | 53 ft 6 in | 375 |
| Minimum headway | 4420 | 14 ft 6 in | 101 |
| Desirable headway | 4572 | 15 ft 0 in | 105 |
| Width between parapets, turnpike road | 10668 | 35 ft 0 in | 245 |
| Width between parapets, public carriage road | 7620 | 25 ft 0 in | 175 |
| Width between parapets. private road | 3658 | 12 ft 0 in | 84 |
| Height of parapets | 1220 | 4 ft 0 in | 28 |

## Underbridges

|  | Prototype |  | Model (mm) |
| :--- | :---: | :---: | :---: |
| Headway - turnpike road | 4377 | 16 ft 0 in | 112 |
| - public carriage road | 4572 | 15 ft 0 in | 105 |
| - private road | 4267 | 14 ft 0 in | 98 |
| Widths of roadways - as for overbridges |  |  |  |
| Height of parapets | 1312 | 4 ft 6 in | 32 |
| Desirable width between parapets - single line | 4724 | 15 ft 6 in | 109 |
|  | 8077 | 26 ft 6 in | 185 |

Buffer Stop

|  | Prototype |  | Model (mm) |
| :--- | :---: | :---: | :---: |
| Length of buffer beam | 2286 | 7 ft 6 in | 53 |
| Height of centre of beam above rail | 1067 | 3 ft 6 in | 25 |

## Earthworks

|  | Prototype |  | Model (mm) |
| :--- | :---: | :---: | :---: |
| Width of cutting at 2ft below rail level for double track with 6ft space | 9144 | 30 ft 0 in | 210 |
| Width of embankment at 2ft below rail level for double track with <br> 6ft space | 9144 | 30 ft 0 in | 210 |
| Inclination of slopes for ordinary ground | $1.5: 1$ |  | $1.5: 1$ |

Ballast

|  | Prototype |  | Model (mm) |
| :--- | :---: | :---: | :---: |
| Bottom ballast. Thickness | 229 | 9 in | 5 |
| Bottom ballast, width for single line | 3353 | 11ft 0in | 77 |
| Top ballast, level of surface | top of sleeper |  |  |
| Top ballast, distance of top edge from rail | 991 | 3 ft 3 in | 23 |
| Maximum size of sieve | 51 | 2 in | 1 |

## Check Rails on Curves

According to the Board of Trade Rules, a check rail must be provided to the inside rail of the curve on curves of 10 chains ( 4620 mm or 15 ft 2 in in 7 mm scale) radius or less. This check rail is often slightly elevated above the running rails and made from 11ft 0in older second hand rail. Curves of greater than 10 chains radius are often checked if high speeds are required and, in certain other places be the track curved or straight, such as; on viaducts or bridges over a certain length and over paved level crossings (to both rails) etc.

Most model curves are sharper than 4620 mm (15ft 2in) and are left unchecked. It is suggested that curves of less than 1 m (40in) are fitted with check rails for appearance purposes.

Figure 1 Prototype construction gauge
The horizontal distances between prototype tracks and adjacent structures are increased for curved track to allow for the throw-over of long vehicles. Radius of Curve in metres - all horizontal distances increased by

| 100 | 257 mm | 200 | 128 mm | 300 | 85 mm |
| :--- | :--- | :--- | :--- | :--- | :--- |
| 400 | 64 mm | 500 | 51 mm | 750 | 34 mm |
| 1000 | 26 mm | 1500 | 17 mm | 2000 | 13 mm |

The model equivalents are shown in Data Sheet D2.1.1 located in Part 2.
